

PROFILE

I partner with engineering, product managers, and users to frame problems, then I design from production data, customer feedback, and the outcome the business has to hit. I research and refine until that outcome is measurable and the work is good enough to ship.

WORK EXPERIENCE

Entrata

July 2019 – 2026

Senior Product Designer · Product Manager hybrid

- I was the sole designer for projects related to the company's largest client.
- I was the product manager and designer who led a remote team of six engineers.
- I led the team and created the designs for a hackathon-winning AI workflow that reads income documents and autofills affordable-housing certifications.
- I simplified core workflows for Homebody, a resident-facing self-serve mobile app. After launch, it reached 4.4 out of 5 stars on iOS from 600+ reviews in the first 6 months.
- I redesigned a complex enterprise setup system to add flexibility without adding complexity. Within the first couple of months, more than 8,000 offers used my new targeting rules.
- I cut the work in half by designing a zero-to-one mobile experience for move-in workflows, so staff could move a resident in, in real time, instead of re-entering the record later.

FamilySearch

2017 – 2019

UX Designer

- I led product design of 26 personalized discovery experiences that served as an entry point and a reason to come back.
- Those campaigns retained 95% more members and 107% more other users than the previous year, reached 1.1 million people outside the US, and earned 90% positive feedback from 86,000 comments.
- I oversaw third-party design so each campaign used the same tried-and-true loop.
- I refined how the product team worked so we moved faster, did more thorough work, and ran into fewer surprises.
