PORTFOLIO FEEDBACK

Notes for Christina

FOR	FROM	DATE
Christina Segura	Cody Duke	November 2, 2026

Hi Christina,

Thanks for sharing your portfolio. I went through the site and your case studies. There is a lot of good work here, and a few focused changes would make it easier to see. I know how hard this is to pull together during a search.

01

What's working

- **The work is easy to find.** The projects are right there, and Home, About, and Resume stay out of the way.
- **The Schwab case shows how you think.** The goals, findings, competitive analysis, sketches, and opportunities make the decisions visible.
- **The projects have range.** A login, a chatbot, Apple Business Chat, and Alexa are different kinds of interaction, held together by the same section treatment.
- **The experience strip helps.** At the very bottom of the homepage, the companies, roles, and dates give a fast picture of where you have been.

02

Worth fixing first

- **The contact link** still goes to a template address, jane@portfolio.com, with the subject "You've got mail!"
- **Resume** opens a page called Styleguide. The file is a 2020 image, so the text cannot be selected, and a phone number is public. A current PDF would be easier to share and to keep up to date.
- **Two titles are swapped.** "Apple Business Chat" opens the Alexa case, and "Wells Fargo + Amazon Alexa" opens Apple Chat. The pictures go to the right places.
- **The tab and footer** still use the template. The homepage tab says "Portfolio - Webflow HTML website template," the cases are Project 1 through Project 4, and the footer says © 2020 and links to Webflow.
- **Two images need a cleanup.** One Schwab phone is an Imgur embed, with the mark and view count still in the frame. On the chatbot case, a row of phones runs off the right edge.

03

Bring the work forward

- **Give the final screens more room.** Older home-button frames, and graphics that have been enlarged, make the work feel older than it is. Use a current phone frame, export the diagrams larger, and leave out images that are too small to read. A large screen is worth the scroll.
- **Lead with the problem, then the solution.** In the Schwab case, the before-and-after and the InVision prototype are the clearest part, and they sit far down the page. Move those up, and let the research explain how you got there.
- **Say what made each project different.** Three of them include a balance, transactions, or an ATM. The interesting part is the constraint: legal copy and screen-reader behavior in the chatbot, designing inside iMessage, and Alexa's failure lines, such as a bad passcode or an account that is not eligible.
- **Close the loop on the outcome.** Schwab already mentions 10.77 million clients, a call spike, and a later test where 6 of 7 people found the new login clear. Add whether it shipped, or what you would watch. "Fewer calls about this step" is enough.

04

Homepage and About

- **Make the hello more specific.** "A passion for engaging, innovative, and delightful products" is friendly. One sentence about the problems you like, or how you like to work with a team, will stay with someone longer.
- **Use one title.** The site currently says UI/UX designer, UX Designer, Product Designer, Senior UI/UX Designer, and User Experience Designer.
- **The 10+ years line** is on the homepage as well, at the very bottom, under "My experience." Keep the years, and the roles just under them. The rest of that sentence can say more than a familiarity with UX standards.
- **Let About say a little more.** The photo, and Mochi and Hiro, are worth keeping. A few sentences on how you work would help, and it can stay short. Your resume also shows medical-device and agency work. Mentioning that range would make these four bank cases feel like a selection.
- **Add a year, and a problem line, to each card.** Use the same title on the card and in the case. A domain of your own is a nice last step. Check the renewal price before you buy.

I would keep this site. Start with the links, titles, and footer, then move the Schwab solution up and give the final screens more room. I hope this is useful, and I would be glad to look again.
