PROFILE

How I think about product design:

I design products people come back to — not screens that merely ship. I work from evidence: field research, production data, and call research. Visuals matter when they serve a job. I can own look and feel as the only designer, and I can lead through a team — framing the problem and partnering with engineering either way.

SKILLS

I run the loop from research through delivery: **retention and habit loops, field and call research, production data, systems UX, visual craft** (typography, identity), and **AI-assisted prototyping** — without outsourcing the decisions.

Software I'm fluent in

Figma, Cursor, SQL, Expo, SwiftUI, FigJam

* Tools are leverage. I pick what the problem needs.

EDUCATION

BFA, Graphic Design

Brigham Young University-Idaho

WORK EXPERIENCE

Entrata

July 2019 – 2026

Senior Product Designer · Product Lead (~1 year)

Property-management software used by apartment staff and residents. Dedicated designer for Greystar, one of the largest U.S. multifamily operators. Product Lead with an owned engineering team.

- Translated core Resident Portal workflows into the Homebody resident app and simplified them for a mobile-first, self-serve experience. After launch, Homebody sat at 4.4/5 on iOS from 600+ resident reviews.
- Redesigned how staff create rental promotions so one offer can include multiple gifts or credits. Usability testing kept the flow inside the setup staff already knew. After launch, that choice — which did not exist before — was in use across dozens of clients.
- Designed a mobile move-in flow so staff can check residents in at the table even without reliable Wi-Fi — instead of marking a spreadsheet and re-entering everyone the next day. Site visits and production data set the scope. Handed to the iOS team as SwiftUI. Not yet in production.
- Designed a field mobile experience around looking up a resident and taking the next action, based on customer interviews and sales-call recordings. The bet: people keep an app they use every day, not one leadership mandates they download.

FamilySearch

2017 – 2019

UX Designer

- Led product design for personalized discovery experiences (Pioneer, Ancestor Calendar, WWI Draft, and 26 campaigns in total) that showed beginners a specific ancestor and one next step — instead of sending them to a search box.
- Versus the previous year: **95% more members retained** and **107% more other patrons retained**. **1.1 million** people outside the US engaged. **86,000** comments, **90% positive**. Calendar used birthdays already in the tree as a reason to come back the next month.
- Set campaign goals with product managers, and oversaw third-party design so each campaign reused the same product loop instead of becoming a one-off marketing site.
