Chris, Head of Product Design

Product Designer

I am applying for the Product Designer role at Ashby. You are not hiring someone to wait for a brief, draw wireframes, and pass mocks to engineering. You want a designer who can own a problem, write the spec, consult when a pattern already exists, and raise the quality of decisions across the product team. That is the work I have been doing.

At Entrata I spent seven years on desktop SaaS used by staff coordinating thousands of daily tasks. For about a year I was Product Lead with an owned engineering team. I framed the work, wrote the spec, and stayed through ship. I was also the dedicated designer for Greystar. Some of that work was owning a feature end to end. Some of it was sitting with engineers on layout, flows, and what could reuse existing components instead of waiting on a mock.

When we redesigned how staff create rental promotions, usability testing showed they already used the existing Pricing pattern as the map. We extended that system instead of shipping a sleek one-off. After launch, 8,290 specials used the new targeting rules. At FamilySearch I set a discovery loop as a standard (named ancestor, relationship in a sentence, one next action) and oversaw third-party design so 26 campaigns did not become 26 one-offs. Retention rose 95% for members and 107% for other users versus the prior year.

I have not designed recruiting software. I have designed for professionals who are underwater in coordination work, and I am used to having my decisions challenged by engineering and product. I live in Pleasant Grove, Utah, and I work remotely.

I would welcome the chance to walk you through the work.

Sincerely,
Cody Duke
