PROFILE

How I work on a product team:

I take ambiguous product work and turn it into a spec engineering can ship. Some problems I own end to end: framing, IA, interaction, and delivery with an engineering team and no separate PM. Some need a consult, a reused pattern, and a written standard. I use research and production data when they change the bet, and craft when the usability problem is already obvious.

SKILLS

End-to-end product ownership
Specs and written alignment
Information architecture
Layout and interaction design
Desktop SaaS / complex B2B
Design systems and patterns
Engineering partnership
Heuristics and craft
Field research and production data
Customer and GTM collaboration
Figma
Cursor · Expo · SwiftUI

EDUCATION

BFA, Graphic Design
Brigham Young University–
Idaho
2017

WORK EXPERIENCE

Entrata

July 2019 – 2026

Senior Product Designer · Product Lead (~1 year)

Desktop property-management SaaS used by staff coordinating thousands of daily tasks. Dedicated designer for Greystar. Product Lead for about a year with an owned engineering team: I framed the work, wrote the specs, and shipped.

- Owned larger features as Product Lead: Jobs-To-Be-Done, navigation, IA, layout, and interaction. Then I wrote the spec and stayed through engineering delivery instead of handing off mocks.
- Redesigned a complex desktop setup system so one offer could carry multiple targeted incentives. Usability testing showed staff already used the existing Pricing pattern as the map, so we extended that system instead of shipping a sleek one-off. After launch, 8,290 specials used the new targeting rules.
- Embedded with Greystar as their dedicated designer. Worked from site visits, customer interviews, and sales-call recordings, then consulted engineering on layout, flows, and what could reuse existing components.
- Designed a field workflow that turned a two-part data-entry process into a real-time check-in, cutting the work of moving someone in by more than half. Site visits and SQL set the scope. Handed to iOS as SwiftUI.
- Designed the information architecture for Entrata's first property-manager mobile app around the daily job: look up a resident and take the next action, instead of shrinking the desktop product onto a phone.

FamilySearch

2017 – 2019

UX Designer

- Led product design of 26 personalized discovery experiences. Each one started from a named ancestor and one next action instead of a search lesson. Retention rose 95% for members and 107% for other users versus the prior year.
- Set that loop as a standard: hook from data we already had, relationship in a sentence, one next action. Then I oversaw third-party design so volume did not become 26 one-offs.
- Tightened how the product team worked so we moved faster, did more thorough work, and ran into fewer surprises.
