PROFILE

How I work on a product team:

I design inside the system people already use. I research with the people doing the work, test the interaction, and finish a visual UI that follows the design system. I use AI in my own process, and I design AI so a person can direct it, trust it, and stay in control.

SKILLS

Interaction design and visual UI

Design systems

User research and usability testing

Information architecture

Prototyping

Desktop SaaS / complex B2B

AI product experiences

AI-assisted research and prototyping

Figma (flows, prototype, handoff)

Engineering partnership

Web and mobile

EDUCATION

BFA, Graphic Design

Brigham Young University-Idaho

2017

WORK EXPERIENCE

Entrata

July 2019 – 2026

Senior Product Designer · Product Lead (~1 year)

B2B property-management software used by apartment staff and residents.

- Redesigned a complex setup system so one offer could carry multiple targeted incentives, inside the existing design system, after usability testing showed staff already used that pattern as the map. After launch, 8,290 specials used the new targeting rules.
- Led a team that designed an AI flow to read income documents and autofill affordable-housing certification, so a long application became an upload a person could still review. Hundreds of teams entered. We won Most Likely to Land a New Logo.
- Designed a bulk-upload workflow with visible mapping confidence, match buckets, and exception review so staff could direct, trust, and correct the model before anything executed.
- Dedicated designer for Greystar. Worked from site visits, customer interviews, and sales-call recordings, then sat with engineering on layout, flows, and what could reuse existing components.
- Product Lead for about 1 year with an owned engineering team, from research through ship.
- Simplified Homebody, a resident-facing mobile app. After launch, 4.4/5 on iOS from 600+ reviews in the first 6 months.

FamilySearch

2017 – 2019

UX Designer

- Led product design of 26 personalized discovery experiences on one loop: a named person, the relationship in a sentence, one next action. Retention rose 95% for members and 107% for other users versus the prior year.
- Set that loop as a standard and guided third-party design so the volume stayed one product, with the same visual system.
