## PROFILE

### *How I think about product design:*

I design products people come back to, not screens that merely ship. I work from evidence: field research, production data, and call research. Visuals matter when they serve a job. I can own look and feel as the only designer, and I can lead through a team, framing the problem and partnering with engineering either way.

## SKILLS

Retention and habit loops

Field and call research

Production data

Systems UX

Visual craft

AI-assisted prototyping

End-to-end product design

Figma (prototype, handoff)

Engineering partnership

Web and mobile

Cursor · Expo · SwiftUI

FigJam

## EDUCATION

**BFA, Graphic Design**

Brigham Young University–  
Idaho

2017

## WORK EXPERIENCE

### Entrata

July 2019 – 2026

Senior Product Designer · Product Lead (~1 year)

Property-management software used by apartment staff and residents.

- Dedicated designer for Greystar, one of the largest U.S. multifamily operators.
- Product Lead with an owned engineering team.
- Translated core Resident Portal workflows into the Homebody resident app and simplified them for a mobile-first, self-serve experience. After launch, Homebody sat at 4.4/5 on iOS from 600+ resident reviews.
- Redesigned how staff create rental promotions so one offer can include multiple gifts or credits. Usability testing kept the flow inside the setup staff already knew. After launch, that choice, which did not exist before, was in use across dozens of clients, and 8,290 specials used the new targeting rules.
- Designed a mobile move-in flow so staff can check residents in at the table even without reliable Wi-Fi, instead of marking a spreadsheet and re-entering everyone the next day. Site visits and production data set the scope. Handed to the iOS team as SwiftUI.
- Designed a field mobile experience around looking up a resident and taking the next action, based on customer interviews and sales-call recordings. The bet: people keep an app they use every day, not one leadership mandates they download.

### FamilySearch

2017 – 2019

UX Designer

- Led product design for personalized discovery experiences (Pioneer, Ancestor Calendar, WWI Draft, and 26 campaigns in total) that showed beginners a specific ancestor and one next step, instead of sending them to a search box.
- Those campaigns retained 95% more members and 107% more other users than the previous year, reached 1.1 million people outside the US, and earned 90% positive feedback from 86,000 comments. Calendar used birthdays already in the tree as a reason to come back the next month.
- Set campaign goals with product managers, and oversaw third-party design so each campaign reused the same product loop instead of becoming a one-off marketing site.
