Engine hiring team

Senior Product Designer, Flights

I am applying for the Senior Product Designer, Flights role at Engine. A traveler has a city, a day, and a budget, and then a wall of fares. The design job is the moment they compare and commit, and the pattern that lets product and engineering ship the next change without waiting on a new design. I have not designed flight search. I have spent seven years on that turn.

At Entrata, staff stood in a move-in line while the real product lived on a desktop they could not use there. Three site visits and interviews with about twenty operators changed the design to search, readiness, and confirm. I handed it to the iOS team as SwiftUI. They walked the module and found five defects in about thirty minutes, before it was in the build. I also set the information architecture for Entrata's first property-manager app around looking up a person and taking the next action, after customer interviews and a review of sales-call recordings. For about a year I was Product Lead with an owned engineering team. I framed the work with product and engineering, wrote the spec, and stayed through ship.

When I redesigned how staff create rental promotions, usability testing showed they already used the existing Pricing pattern as the map. We extended that system, and other teams inherited the contract. After launch, 8,290 specials used the new lease-term rules, and multi-select incentives shipped as a behavior that had not existed before. At FamilySearch I led 26 discovery campaigns on one loop and oversaw outside design so the volume stayed one product. Retention rose 95% for members and 107% for other users versus the prior year. I also tightened how that team reviewed work, so we moved faster and ran into fewer surprises.

Cursor is how I prototype, write the spec, and show a behavior. I have also put AI inside the product: an income-document flow that turned a long certification into an upload. Hundreds of teams entered that work, and we won Most Likely to Land a New Logo. I live in Pleasant Grove, Utah, and I work remotely in the US.

I would welcome the chance to walk you through the work.

Sincerely,
Cody Duke
