PROFILE

How I work on a product team:

I embed with product and engineering to turn complex professional workflows into a clear next step. I research with customers, prototype to test the interaction, and stay through handoff. Figma when the canvas is faster, code when the behavior is the question. AI in my process, and AI in the product, so people can direct it, trust it, and stay in control.

SKILLS

Search, compare, and choose
Patterns that scale past design
End-to-end product design
Prototypes in code
AI as a daily tool
Cursor
Design systems
Stakeholder partnership
Design reviews
Figma
Production data
SwiftUI handoff

EDUCATION

BFA, Graphic Design
Brigham Young University-
Idaho
2017

WORK EXPERIENCE

Entrata

July 2019 – 2026

Senior Product Designer (7 years) · Product Lead (~1 year)

B2B property-management software for staff and residents.

Dedicated designer for Greystar. Product Lead for about a year with an owned engineering team: I framed the work with product and engineering, wrote the spec, and shipped.

- Designed a table-side move-in flow as search, readiness, and confirm, after three site visits and interviews with about 20 operators. The old job was a spreadsheet marked in the line and re-entered the next day. Handed to the iOS team as SwiftUI. They walked the module and found five defects in about 30 minutes.
- Set the information architecture for Entrata's first property-manager app around looking up a person and taking the next action, from customer interviews and sales-call recordings.
- Redesigned a mature setup flow so one rental offer could carry multiple targeted incentives, inside the Pricing pattern staff already used. Usability testing kept the work on that system, so other teams inherited the contract. After launch, 8,290 specials used the new lease-term rules, and 162 specials on 38 clients used multi-select that did not exist before.
- Led a team that designed an AI flow to read income documents and autofill affordable-housing certification, so a long application became an upload. Hundreds of teams entered. We won Most Likely to Land a New Logo.

FamilySearch

2017 – 2019

UX Designer

- Led product design of 26 discovery campaigns on one loop: a specific person already on the tree, the relationship in a sentence, one next action. Retention rose 95% for members and 107% for other users versus the prior year, with 90% positive feedback from 86,000 comments, and 1.1 million people outside the US engaged.
- Set that loop as the standard and oversaw third-party design so later campaigns shipped on the pattern.
- Refined how the product team gathered feedback and made decisions, so we moved faster and ran into fewer surprises.
