Ryan Alvarez-Cohen, Chief Product Officer

Senior Product Designer

I am applying for the Senior Product Designer role at Popl. A rep on a show floor has a few seconds between conversations. The badge scan has to be fast on a phone, and it has to land in the dashboard as a lead the revenue team can actually work. I have spent seven years on that split: capture in the moment, and a system of record that stays powerful without getting harder to use.

At Entrata, apartment staff stood in a move-in line while the real product lived on a desktop they could not use there. Three site visits and interviews with about twenty operators changed the design. Search came first, offline shipped in the first release, and leftover checklist items became a follow-up instead of a second data-entry shift. I handed it to the iOS team as SwiftUI. They walked the module and found five defects in about thirty minutes, before it was in the build. I also set the information architecture for Entrata's first property-manager app around looking up a person and taking the next action, after customer interviews and a review of Gong calls. Homebody, the resident app, reached 4.4 out of 5 on iOS from more than 600 reviews in its first six months.

You will inherit a feature-rich product, and the work is to unify it. When I redesigned how staff create rental promotions, usability testing showed they already used the existing Pricing pattern as the map. We extended that system. After launch, 8,290 specials used the new lease-term rules, and multi-select incentives shipped as a behavior that had not existed before. At FamilySearch I led 26 discovery campaigns on one loop and oversaw outside design so the volume stayed one product. Retention rose 95% for members and 107% for other users versus the prior year. I also tightened how that team worked so we moved faster and ran into fewer surprises.

For about a year I was Product Lead with an owned engineering team. I framed the work, wrote the spec, and made the tradeoff in the room. Event lead capture and a Salesforce sync are new domains for me. The workflow is familiar: a person in the field records something that has to land correctly later, and the desk product has to show its work. I have a BFA in graphic design, so a marketing surface gets the same care as the product. I live in Pleasant Grove, Utah, and I work remotely.

I would welcome the chance to walk you through the work.

Sincerely,
Cody Duke
