PROFILE

How I work on a product team:

I design the moment someone captures work in the field, and the desk product that has to trust it later. A phone gets a search and a next step. A web dashboard keeps the rules, the setup, and the catch-up. I extend the design system people already know, and I can say why to engineering.

SKILLS

Web and mobile product design

Complex B2B workflows

Design systems

Figma

Customer interviews and call review

Usability testing

Design process and QA

Information architecture

Visual craft

Engineering partnership

SwiftUI handoff

End-to-end ownership

EDUCATION

BFA, Graphic Design

Brigham Young University-Idaho

2017

WORK EXPERIENCE

Entrata

July 2019 – 2026

Senior Product Designer · Product Lead (~1 year)

B2B property-management software for staff and residents, on the desktop and in the field. Dedicated designer for Greystar. Product Lead for about a year with an owned engineering team: I framed the work, wrote the spec, and shipped.

- Designed field mobile and the desktop system of record as two products. On the phone, staff look up a person and take the next action. On the desktop, they set up rules and catch up later. Customer interviews and a review of Gong calls set that split.
- Designed a table-side move-in flow after three site visits and interviews with about 20 operators: search first, offline in the first release, leftover items as a follow-up task. Handed to the iOS team as SwiftUI. They walked the module and found five defects in about 30 minutes.
- Redesigned a mature desktop setup flow so one rental offer could carry multiple targeted incentives, inside the Pricing pattern staff already used. Usability testing kept the work on that system. After launch, 8,290 specials used the new lease-term rules, and 162 specials on 38 clients used multi-select that did not exist before.
- Designed an upload flow that matches a spreadsheet to leases, shows three buckets, and waits for a person before anything is written, so an automated catch-up stays something staff can trust.
- Simplified Homebody, a resident-facing mobile app. After launch, 4.4/5 on iOS from 600+ reviews in the first six months.

FamilySearch

2017 – 2019

UX Designer

- Led product design of 26 personalized discovery campaigns on one loop: a named person, the relationship in a sentence, one next action. Retention rose 95% for members and 107% for other users versus the prior year, with 90% positive feedback from 86,000 comments.
- Oversaw third-party design so each campaign used that loop and the same visual system.
- Refined how the product team worked so we moved faster, did more thorough work, and ran into fewer surprises.
