Rula hiring team

Senior Product Designer, Provider Team

I am applying for the Senior Product Designer role on Rula's Provider Team. A therapist's hour belongs with the patient, and the tools around that hour decide how much of it survives. I design the administrative workflow so the professional can finish it, trust it, and get back to the person in front of them.

At Entrata I spent seven years on property-management software for the people who run a building. Staff stood in a move-in line while that system lived on a desktop they could not use there. Three site visits and interviews with about twenty operators changed the design to search, readiness, and confirm, including when the Wi-Fi was down. I handed it to the iOS team as SwiftUI, and they found five defects in about thirty minutes before it was in the build.

I have also designed AI where the record has to be right. An upload agent matches a spreadsheet to leases, sorts the rows into three buckets, and writes nothing until a person confirms. A separate flow reads income documents and fills an affordable-housing certification, so a long regulated application becomes an upload a person can still review. Hundreds of teams entered that work, and we won Most Likely to Land a New Logo.

When I redesigned how staff create rental promotions, usability testing showed they already used the existing Pricing pattern as the map. We extended that system, and other teams inherited the contract. After launch, 8,290 specials used the new lease-term rules, and 162 specials on 38 clients used a multi-select path that had not existed before.

For about a year I was Product Lead with an owned engineering team. I framed ambiguous work with product and engineering, wrote the workflow down, and stayed through delivery. I live in Pleasant Grove, Utah, and I work remotely in the United States. I would welcome the chance to walk you through the work.

Sincerely,
Cody Duke
