PROFILE

How I work on a product team:

I design the tools a practice uses between the moments that matter. I take a multi-step operations workflow, find where people leave the system, and put a reviewed next step back in the day. I research with the people who run the work, prototype in Figma or in code, and stay with product and engineering through delivery. When AI belongs in the product, the person can see the result, correct it, and stay accountable.

SKILLS

Multi-step workflow design
Operations and practice software
AI experiences with human review
End-to-end ownership
Figma (flows, prototype, systems)
Research with operators
Written workflow alignment
Design systems
Product and engineering partnership
Production data
Prototypes in code
Cursor · SwiftUI

EDUCATION

BFA, Graphic Design
Brigham Young University–Idaho
2017

WORK EXPERIENCE

Entrata

July 2019 – 2026

Senior Product Designer (7 years) · Product Lead (~1 year)

B2B property-management software for staff who run a property. Dedicated designer for Greystar. Product Lead for about a year with an owned engineering team: I framed the work, wrote the spec, and shipped.

- Designed a table-side move-in flow as search, readiness, and confirm, after three site visits, interviews with about 20 operators, and a production audit that found about 36% of move-ins at a large student operator had no product activity that day. Handed to the iOS team as SwiftUI. They walked the module and found five defects in about 30 minutes.
- Designed an upload that matches a spreadsheet to leases, sorts rows into three buckets, and waits for a person before anything is written, so an automated catch-up stays something staff can trust.
- Led a team that designed an AI flow to read income documents and autofill affordable-housing certification, so a long, regulated application became an upload a person could still review. Hundreds of teams entered. We won Most Likely to Land a New Logo.
- Redesigned a mature setup flow so one offer could carry multiple targeted incentives, inside the Pricing pattern staff already used. Usability testing kept the work on that system. After launch, 8,290 specials used the new lease-term rules, and 162 specials on 38 clients used multi-select that did not exist before.
- Set the information architecture for Entrata's first property-manager app around looking up a person and taking the next action, from customer interviews and sales-call recordings.

FamilySearch

2017 – 2019

UX Designer

- Led product design of 26 discovery campaigns on one documented loop: a named person, the relationship in a sentence, one next action. I oversaw third-party design so later campaigns shipped on that pattern.
- Retention rose 95% for members and 107% for other users versus the prior year, with 90% positive feedback from 86,000 comments, and 1.1 million people outside the US engaged.
