Slate hiring team

Staff Designer

I am applying for the Staff Designer role at Slate. I have loved cars since I was a kid, and the vehicle I still want is the one you are building: something a person can afford, then make their own. The digital job is that same promise. Someone discovers a Slate, configures the truck or SUV they actually need, and keeps living with it after the keys are in their hand.

At Entrata I spent seven years on a phone and a desktop system of record. Staff stood in a move-in line while the product lived on a computer they could not use there. Three site visits and interviews with about twenty operators changed the design to search, readiness, and confirm, including when the Wi-Fi was down. I handed it to the iOS team as SwiftUI, and they found five defects in about thirty minutes before it was in the build. Homebody, the resident app, reached 4.4 out of 5 on iOS from more than 600 reviews in its first six months.

The closer match to a configurator is how staff build a rental offer. A special used to hold one incentive, and two offers meant two specials. Usability testing showed people already used the Pricing pattern as the map, so we extended that system. Other teams inherited the contract. After launch, 8,290 specials used the new lease-term rules, and 162 specials on 38 clients used a multi-select path that had not existed before.

At FamilySearch I led 26 discovery campaigns on one loop: a named person, the relationship in a sentence, one next action. I oversaw outside design so the volume stayed one product. Retention rose 95% for members and 107% for other users versus the prior year. I also design AI so a person can see the result and stay in charge. An upload matches a spreadsheet to leases, sorts the rows into three confidence buckets, and writes nothing until someone confirms.

For about a year I was Product Lead with an owned engineering team. I framed the work, wrote the spec, and stayed through delivery. Vehicle configuration is a new domain for me. The workflow is familiar: a person choosing what they need, and a system that stays coherent as the options multiply. I live in Pleasant Grove, Utah, and I work remotely in the United States. I would welcome the chance to walk you through the work.

Sincerely,
Cody Duke
