PROFILE

How I work on a product team:

I design the path from first interest to a product someone keeps. A phone gets the everyday job. A web flow holds the choices, and those choices stay one system as they multiply. I set the pattern other people can ship on, and I prototype in code when the behavior is the question.

SKILLS

Multi-surface product design

Mobile patterns and SwiftUI handoff

Web configuration flows

Design systems and standards

Onboarding, activation, and retention

AI features with a human check

AI-assisted prototyping

Figma (components, prototype, handoff)

Critique and team standards

Field research and production data

Engineering partnership

Cursor · Expo · SwiftUI

EDUCATION

BFA, Graphic Design

Brigham Young University–Idaho

2017

WORK EXPERIENCE

Entrata

July 2019 – 2026

Senior Product Designer (7 years) · Product Lead (~1 year)

Property-management software for staff and residents, on the desktop and on the phone. Dedicated designer for Greystar. Product Lead for about a year with an owned engineering team: I framed the work, wrote the spec, and shipped.

- Designed a table-side move-in flow as search, readiness, and confirm, after three site visits and interviews with about 20 operators. The first release worked when the Wi-Fi was down. Handed to the iOS team as SwiftUI. They walked the module and found five defects in about 30 minutes.
- Set the information architecture for Entrata's first property-manager app around looking up a person and taking the next action, from customer interviews and sales-call recordings. Desktop work that needed a desk stayed off the phone.
- Simplified Homebody, a resident-facing mobile app. After launch, 4.4/5 on iOS from 600+ reviews in the first 6 months.
- Redesigned a mature setup flow so one rental offer could carry multiple targeted incentives, inside the Pricing pattern staff already used. Usability testing kept the work on that system, and other teams inherited the contract. After launch, 8,290 specials used the new lease-term rules, and 162 specials on 38 clients used multi-select that did not exist before.
- Designed an upload that matches a spreadsheet to leases, sorts rows into three confidence buckets, and waits for a person before anything is written.

FamilySearch

2017 – 2019

UX Designer

- Led product design of 26 discovery campaigns on one loop: a named person, the relationship in a sentence, one next action. Each campaign was an entry point and a reason to come back.
- Retention rose 95% for members and 107% for other users versus the prior year, with 90% positive feedback from 86,000 comments, and 1.1 million people outside the US engaged.
- Oversaw third-party design so later campaigns shipped on that loop and the same visual system, and tightened how the team reviewed work so we moved faster with fewer surprises.
